ISO 20000: IT service management

It specifies requirements for "establishing, implementing, maintaining and continually improving a service management system (SMS)." An SMS supports the management of the service lifecycle, including the planning, design, transition, delivery, and improvement of services, which meet agreed requirements and deliver value for customers, users, and the organization delivering the services.

ISO 22301: Business continuity management system

It provides a practical framework for setting up and managing an effective Business Continuity Management System that aims to safeguard an organization from a wide range of potential threats and disruptions. Studies show that nearly 1 in 5 businesses suffer a major disruption every year.

ISO 27001: Information security management

Provides requirements for an Information Security Management System which enables organizations of any kind to manage the security of any assets such as financial information, intellectual property, employee details, or information entrusted to third parties.

ISO 13485: Quality management system for medical devices

This internationally agreed standard sets out the requirements for a Quality Management System specific to the medical devices industry. ISO 13485 is designed to be used by organizations involved in the design, production, installation, and servicing of medical devices and related services.

ISO 14001: Environmental management

ISO 14001 sets out the criteria for an Environmental Management System and can be certified against. It maps out a framework that a company or organization can follow to set up an effective Environmental Management System.

Designed for any type of organization, regardless of its activity or sector, it can provide assurance to company management and employees as well as external stakeholders that environmental impact is being measured and improved.

ISO 9001: Quality management

ISO 9001 sets out the criteria for a Quality Management System and is the only standard in the family that can be certified against (although this is not a requirement). It can be used by any organization, large or small, regardless of its field of activity. In fact, there are over 1 million companies and organizations in more than 170 countries certified to ISO 9001.

This standard is based on a number of quality management principles including a strong customer focus, the motivation and implication of top management, the process approach, and continual improvement.

ISO 45001: Occupational health and safety

For organizations that are serious about improving employee safety, reducing workplace risks, and creating better, safer working conditions.

ISO 17025: Testing and calibration laboratories

Enables laboratories to demonstrate that they operate competently and generate valid results, thereby promoting confidence in their work both nationally and around the world.

EU MDR: EU Medical Device Regulation

The European Union Medical Device Regulation (MDR)is a new set of regulations that govern the production and distribution of medical devices in Europe, and compliance with the regulation is mandatory for medical device companiesthat want to sell their products in the European marketplace.

EU GDPR: EU General Data Protection Regulation

The GDPR aimed to provide a single set of data privacy laws across the European Union, which provided higher levels of protection and rights to individuals than those already in place. The GDPR provides the protocols for how businesses and other organizations handle the information relating to the individuals who interact with them. The GDPR also brought in new definitions of personal data, consent types, accountability standards, and the roles involved in decision making, and interpreting, and processing the data.

IATF 16949: International standard for automotive quality management systems

This is a technical specification aimed at the development of a Quality Management Systemthat provides for continual improvement, emphasizing defectprevention and the reduction of variation and waste in the automotive industry supply chain and assembly process.

AS9100: Aviation Standard

This is the most recent standard for organizations that design, develop, or provide aviation, space, and defense products and services, including parts, components, and assemblies.

ITIL: Information Technology Infrastructure Library

ITIL describes processes, procedures, tasks, and checklists that are neither organization-specific nor technology-specific, but thath can be applied by an organization toward strategy, delivering value, and maintaining a minimum level of competency. It allows the organizationto establish a baseline from which it can plan, implement, and measure. It is used to demonstrate compliance and to measure improvement.
